

Solution for bad pages in safari on phone, tablet or desktop

Two step process

(the 'block all cookies' is found in the Safari Preferences, under Privacy)

After researching this a bit with Apple forums, it seems to be a known issue/bug with the last update). I replicated the issue with a machine with those same OS/browser versions.

While I was logged in I was able to get it working by checking **1> "Block all Cookies" in the settings, clicking on something to get me kicked out, then enabling the cookies again just before logging in, and re-clicking on the event editor.**

I know it seems a bit convoluted, but I was following the instructions of someone on the forum as a workaround until Apple fixes this bug

Try this and see if it works.... Hopefully!

Block cookies

A cookie is a piece of data that a site puts on your device, so it can remember you when you visit again. To choose whether Safari blocks cookies, tap Settings > Safari, then turn on Block All Cookies.

If you block cookies, some web pages might not work. Here are some examples:

- You might not be able to sign in to a site using your correct username and password.
- You might see a message that cookies are required or that your browser's cookies are off.
- Some features on a site might not work.

Clear the history and cookies from Safari on your iPhone, iPad, or iPod touch

Learn how to delete your history, cookies, and cache in Settings.

Delete history, cache, and cookies

Here's how to clear information from your device:

- To clear your history and cookies, go to Settings > Safari, and tap Clear History and Website Data. Clearing your history, cookies, and browsing data from Safari won't change your AutoFill information.
- To clear your cookies and keep your history, go to Settings > Safari > Advanced > Website Data, then tap Remove All Website Data.
- To visit sites without leaving a history, [turn private browsing on or off](#).

When there's no history or website data to clear, the setting turns gray. The setting might also be gray if you have web content restrictions set up under [Content & Privacy Restrictions in Screen Time](#).
